

FOR CONSULTANTS AND AGENCIES

# Security testing for *the clients you advise.*

Balhence provides manual, human-verified penetration testing for web applications, APIs and SaaS products, plus relevant cloud, identity and AI systems. Reported findings are checked by a person and explained with clear evidence and practical fixes.

## WHEN TO BRING US IN

## Client needs we can help with

- 01 They are launching or changing a web application, API or SaaS product.
- 02 They need testing evidence for a customer security review or audit.
- 03 They want to assess an AI feature's access to data, tools and actions.

## WHAT CLIENTS CAN EXPECT

## A clear path from scope to findings

- 01 A written scope, deliverables and safety rules before testing.
- 02 Findings checked by a person, with evidence and practical fixes.
- 03 A report walkthrough and follow-up checks when agreed in scope.

## CLIENT INTRODUCTIONS

## A simple introduction, agreed up front.

We agree on your involvement before contacting the client.

## 01 / CHECK FIT

### Share the need

Tell us the type of client, system and timing. We can confirm fit before an introduction.

## 02 / INTRODUCE

### Connect by email

With the client's consent, connect us and share the question they need answered.

## 03 / SCOPE

### We take it forward

Balhence speaks with the client, sends a written scope and quote, and delivers agreed testing.

## Let's discuss an introduction.

Tell us the clients you advise and the testing requests you see. No client name is needed to start.
